WHAT IS CLOUD VPS?

Cloud VPS is a virtual server created on cloud infrastructure, with its own CPU, RAM, storage and IP, working like an independent server with full admin rights.

Compared with shared hosting you control the OS, web server, database and software; compared with a dedicated server, the starting cost is lower and upgrades are granular.

VPSTTT offers 13 Cloud VPS lines: NVMe, AMD EPYC, Ryzen 9, Gold HCM, High clock, HDD, GPU, Anti DDoS, n8n, NAT, Residential, Vietnam and International.

13 lines

Cloud VPS by CPU, storage, location

10 Gbps

Port speed by line, NVMe SSD

3 regions

Data centers in Hanoi, Nha Trang, HCMC
