RESIDENTIAL PROXY

Real residential IPv4 from Vietnamese carriers: static, shared or session-rotating IPs

VPSTTT

WHAT IS RESIDENTIAL PROXY?

A residential proxy uses an IP address that a carrier assigns to an end user's Internet connection, instead of a data center IP.

To target websites and platforms, a connection through a residential proxy looks like a home Internet subscriber in Vietnam, which suits IP-sensitive tasks.

VPSTTT offers three options: a static IP kept for the whole rental period, a shared IP for up to 4 users, and an IP that rotates per session; all use a 100Mbps port.

3 types
Static, shared and session-rotating IPs

100Mbps
Network port on all three lines

24/7
Help with HTTP/SOCKS5 and authentication setup

VPSTTT

RESIDENTIAL PROXY HIGHLIGHTS

1

Real residential IPv4

IPs assigned by Vietnamese carriers, not data center IPs.

2

Static Residential

Keep one fixed IP for the whole term, ideal for long-term accounts.

3

Shared Residential

Each IP is shared by up to 4 users, on VNPT or MobiFone, at a lower cost.

4

Rotating Residential

The IP changes per session; choose FPT, VNPT or Viettel when ordering.

5

HTTP and SOCKS5

Whitelist IP or User/Pass authentication, easy to set up in tools.

6

Volume discounts

Discounts by proxy quantity and rental period, on all three lines.

VPSTTT

SPECIFICATIONS AND USE CASES

IP type	Residential IPv4 from Vietnamese carriers
IP options	Static, Shared (up to 4 users per IP), session Rotating
Carriers	Shared: VNPT, MobiFone; Rotating: FPT, VNPT, Viettel
