WHAT IS SHARED IPV4 PROXY?

Shared IPv4 Proxy uses datacenter IPv4 addresses in Vietnam, with each IP shared by up to 5 users to keep costs down.

It suits tasks that need many Vietnamese IPv4 addresses on a small budget, when each IP does not have to belong to one person.

Proxies support HTTP(S) and SOCKS5 with Whitelist IP or User/Pass authentication; when you need an exclusive IP, move to Private IPv4 Proxy.
