WHAT IS VPS ALMALINUX?

VPS AlmaLinux is a virtual server set up for fast deployment of AlmaLinux 8.4 and 9.4, with its own CPU, RAM, storage and IP and full admin rights.

AlmaLinux is compatible with the RHEL ecosystem, stable in production and supported by many control panels, making it a fit for cPanel, DirectAdmin, business websites, PHP apps and systems moving off CentOS.

At VPSTTT you choose one of four hardware lines: Intel Platinum, AMD EPYC, Ryzen 9 or Intel Gold, and scale resources as your system grows.
