WHAT IS VIETNAM RESIDENTIAL VPS?

Vietnam Residential VPS is a virtual server that runs independently like a private server; the difference is that it uses a Vietnamese residential IP routed through a local residential ISP.

Connections to online services look more natural, making it a fit for location-based content testing, local app QA and legitimate remote workstations.

It runs on Intel Xeon E5-2682v4 with NVMe storage and a 100 Mbps line with unlimited bandwidth, automatic activation and full admin rights.
