VPSTTT

WHAT IS VPS FEDORA?

VPS Fedora is a virtual server set up for fast deployment of Fedora 34, with its own CPU, RAM, storage and IP and full admin rights.

Fedora gives early access to new Linux technology for development, testing and compatibility checks, a good fit for developers, labs, CI, package testing and projects that want a newer kernel or toolchain.

At VPSTTT you choose one of four hardware lines: Intel Platinum, AMD EPYC, Ryzen 9 or Intel Gold, and scale resources when needed.

Fedora 34
Preinstalled when you order

10 Gbps
Network port, enterprise NVMe storage

24/7
Technical support, regular backups

VPSTTT

VPS FEDORA HIGHLIGHTS

1

The right Fedora version

A dedicated Fedora 34 image; switch OS before ordering.

2

DNF and new toolchains

Try compilers, kernels and Podman before going to production.

3

Modern dev environment

Test new container stacks and runtimes away from your laptop.

4

Fast release cycle

New tech first, so plan for regular version upgrades.

5

Enterprise NVMe

Fast reads and writes for builds, containers and packages.

6

Deployment support

VPSTTT checks image, network and setup; you keep full control.

VPSTTT

CONFIGURATIONS AND USE CASES

CPU lines	Intel Platinum 8272CL, AMD EPYC 7J13, AMD Ryzen 9 9950X, Intel Gold 6144
vCPU / RAM	1–96 vCPU, 1–256 GB RAM
Storage	Enterprise NVMe, 20–500 GB
Network speed	10 Gbps, dedicated IPv4/IPv6
Backups	Twice a week
Operating system	Fedora 34

Great for

- Development and package testing
- CI, Podman and staging
- Validation before production
- Labs close to the RHEL ecosystem
- Developers and labs

VPSTTT

WHY CHOOSE VPSTTT?

Tier III data center infrastructure

Servers hosted in standard data centers with redundant power and cooling.

Fast setup, self-service

Order, pay and manage your services directly in the client area.

24/7 technical support

Our engineers are on duty around the clock via hotline, Zalo, Messenger and tickets.

Clear policies

Transparent service level agreement (SLA), refund and privacy policies.
