VPSTTT

WHAT IS BUDGET VPS?

Budget VPS is a virtual server with right-sized starter configurations for websites, small apps or learning environments, while keeping full admin rights like any regular VPS.

Nothing essential is cut: you still get enterprise NVMe, 10 Gbps networking, a dedicated IPv4, regular backups and four CPU lines so you never overbuy.

Windows Server 2012 is preselected for common Windows software; switch to Linux or another Windows version on any plan before ordering.

NVMe
Enterprise NVMe on every plan

10 Gbps
Network port, dedicated IPv4

4 CPU lines
Platinum, EPYC, Ryzen 9, Intel Gold

VPSTTT

BUDGET VPS HIGHLIGHTS

1

Cost-efficient Platinum

Balanced CPU, RAM and NVMe for websites and small services.

2

AMD EPYC multitasking

Run many workers, cron jobs and sites on one VPS.

3

Responsive Ryzen 9

For APIs, game loops and tools that need per-core speed.

4

Steady Intel Gold

High clocks for apps and panels that need even response.

5

NVMe and 10 Gbps

Fast storage and a large port for syncing and downloads.

6

Regular backups

Backups twice a week, with upgrades always available.

VPSTTT

CONFIGURATIONS AND USE CASES

CPU lines	Intel Platinum 8272CL, AMD EPYC 7J13, AMD Ryzen 9 9950X, Intel Gold 6144
vCPU / RAM	1–96 vCPU, 1–256 GB RAM
Storage	Enterprise NVMe, 20–500 GB
Network speed	10 Gbps, dedicated IPv4
Operating system	Ubuntu, Debian, AlmaLinux, CentOS, Rocky Linux, Windows Server

Great for

- New websites and landing pages
- Learning and personal labs
- Staging and version testing
- Bots, cron jobs, light automation
- Control panels and small sites
- Short-term projects and campaigns
