VPSTTT

WHAT IS VPS NAT AMD?

A NAT VPS uses Network Address Translation to share one public IP address across several VPS, cutting the cost of IPv4 addresses.

Each NAT VPS still has its own CPU, RAM, storage and operating system; it uses an internal IP, and selected ports are mapped out through the shared public IP.

VPS NAT AMD at VPSTTT runs on AMD EPYC 7J13 with NVMe storage and 10 Gbps networking, ideal for tools, bots, small websites, learning and test services.

EPYC 7J13
Multi-core, multi-thread AMD EPYC CPU

10 Gbps
Network port, NVMe SSD storage

120 Gbps
AntiDDoS Pro firewall

VPSTTT

VPS NAT AMD HIGHLIGHTS

1

AMD EPYC 7J13 CPU

Many cores and threads for sites, bots and always-on tasks.

2

Lower cost with NAT

A shared IPv4, with services reached through mapped ports.

3

NVMe SSD storage

Fast reads and writes for small sites, databases, automation.

4

AntiDDoS Pro 120 Gbps

Abnormal traffic is filtered before it reaches the VPS.

5

Backups twice a week

The three latest copies kept on a separate backup server.

6

Automatic activation

Get your ports and SSH or Remote Desktop access quickly.

VPSTTT

CONFIGURATIONS AND USE CASES

CPU	AMD EPYC 7J13
vCPU / RAM	1–3 vCPU, 1–4 GB RAM
Storage	NVMe SSD, 20–30 GB
Network speed	10 Gbps
IP address	Shared IPv4, mapped ports
Backups	Twice a week
Operating system	Ubuntu, CentOS, AlmaLinux, Debian, Windows Server

Great for

- Automation tools and bots 24/7
- Small sites, WordPress, landing pages
- Light game servers, community bots
- Dashboards, webhooks on given ports
- Learning and practicing Linux

VPSTTT

WHY CHOOSE VPSTTT?

Tier III data center infrastructure

Servers hosted in standard data centers with redundant power and cooling.

24/7 technical support

Our engineers are on duty around the clock via hotline, Zalo, Messenger and tickets.

Fast setup, self-service

Order, pay and manage your services directly in the client area.

Clear policies

Transparent service level agreement (SLA), refund and privacy policies.
